Diploma In Software Engineering

Dairy Farm Management System

GUI Module Course Work Project Proposal

Submitted by:

Name: K.K.Naveen Rashmika Devinda

Registration No: GADSE251-F-018

Submission Date: 2026-01-30

Declaration

I, Naveen Rashmika Devinda, hereby declare that this project proposal submitted for GUI MODULE course work is an original work done by me under the guidance of Ms.Ashanthi kurakulasuriya and also declare that this proposal record has not been submitted to any other institute.

Introduction

There are many medium scale dairy farms in SriLanka.Their primary business activities are breeding cows,producing milk,storing milk,and making dairy products like yogurts,curd and selling them to local sellers.

Problem Definition

At the moment most of the farms are using manual and paper based records which are difficult to maintain.And even if someone wanted to see a past record its very time consuming to view them.

So I thought of making a C# winform application computerized system for this problem

My Solution for the problem

My solution is a computerized **Dairy Farm Management System** designed using C#winfroms,visual studio and sql server.This system will automate most of the business activities in the farm and will use a good secure database in sql server.

Aim

My aim is to replace all manual farm records, improve data security, automate sales calculations, reduce paperwork, and make all farm operations more efficient.

Software Requirements Specifications(SRS Doc)

Functional Requirements

System has two use roles,

- **Admin**
- **Employee**

1. Admin Requirements

Admin shall be able to,

1. Login to the system
2. Add, update, and delete employee details
3. View the employee dashboard
4. Logout from the system

2. Employee Requirements

Employee shall be able to,

Manage Cows

1. Add, update, and delete cow details
2. View the cow list

Manage Milk Production

3. Add, update, and delete daily milk production records
4. View the daily milk dashboard

Cow Health

5. Add, update, and delete cow health and vaccination records
6. View health reports

Breeding

7. Add, update, and delete cow breeding details
8. View breeding reports

Sales and Finance

9. Record milk sales
10. View sales reports
11. Record expenditures and incomes
12. View expenditure and income lists

Dashboard

13. View the overall dashboard

Non-Functional Requirements

1. System GUI should use a user friendly comfortable dark theme
2. All operations should be fast and respond within 2-3 seconds
3. Security should be high
4. Validations should be use for necessary places
5. System reliability should be high
6. System should be compatible for windows pcs
7. System should be simple so users can use it easily

Technologies I will be using

- Programming language:C# winforms
- IDE:Visual Studio
- Database:SQL Server
- Other:Github for backing up my codes and MS word for making documents

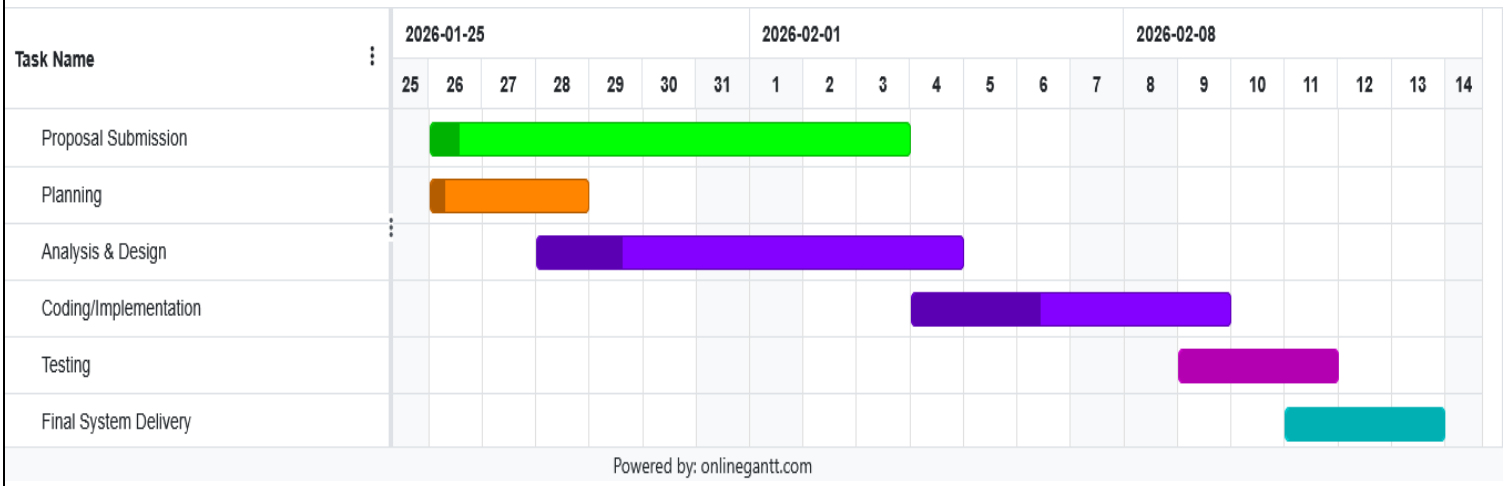
Hardware Requirements

My software will require these hardware requirements to run smoothly

Minimum requirements

- Processor:Intel i3 2nd gen
- Ram:4GB
- Storage:256GB SSD
- Monitor resolution 720p
- A keyboard and a mouse

Other hardawares:Printer for printing reports and invoices

Project Timeline


This is my project expected timeline.
